

# CHANGE OR STICK BACK A VALVE

**REPLACE A VALVE:** 1. If the valve is not completely gone, put the valve in boiling water during 5 minutes. 2. Undo delicately the valve. 3. If you cannot do it, or if you don't have boiling water, cut the valve to remove. No fear, the Wanikou adhesive valves are larger than the original valves which allow them to cover up the hole you just made. If the valve doesn't come off, you'll have to cut it.

3

4. Apply a second layer of Bladder Glue on the 2 surfaces. Allow drying again for 10 to 15mn.

5. Put the valve back, checking that the bladder is flat.

6. Press tightly on the valve. Put a weight on it. Reinforce the repair with a line of Bladder Glue around the valve.

**Kits: Big rescue kit, Small rescue kit, Complete bladder kit, bladder glue.**
