

REPAIR A LEADING EDGE

BIG TEAR: 1. Clean properly with some alcohol. Make sure the cloth is dry and clean before proceed to repair.
2. Apply a strip of Dacron inside the strut or leading edge to make the 2 sides come together. 3. Apply a strip of Dacron on the rip.

4. With the applicator, spread the glue Repair Sail on top of the adhesive fiber.
5. After drying (12hour) you can apply a strip of Dacron on the fiber, do not forget to make the corner round.
6. Close around the Dacron with some Repair Sail glue. 7. Your kite is ready to go sailing.

Kits: Big Rescue Kit, kit Spi Dacron.

SMALL TEAR: 1. You can use a simple strip of Dacron. 2. Apply the strip of Dacron inside the rip.
3. Apply a second strip of Dacron out side the rip to reinforce the sail, do not forget to make round the corners of the Dacron.

Kits: Big Rescue Kit, Kit Spi dacron, Small rescue kit.
